Microsoft 365 Security Monitoring

primend

CYBERS

Primend and CYBERS joint service to provide our customers with the best security monitoring solutions.

While consuming cloud services, it is vital that all security measures are in place. Otherwise, it poses serious threats to organizations, such as taking over an e-mail address, stealing personal data and trade secrets, or even taking control of the entire organization's infrastructure and business.

Are you certain that your cloud services are secure?

Performing an initial security audit is easy, we convene a workshop <u>lasting 3 hours</u> to review and verify various cloud settings.

Initial Security Audit

Short summary of current situation, giving an overview of:

- How vulnerable to attack is the organizations cloud environment;
- Drawing attention to critical shortcomings.

Comprehensive situation mapping:

- Necessary changes concerning cyber security;
- Changes to be implemented immediately in the organization or its infrastructure;
- Recommended order of priorities for implementing changes.

Client position on cyber security maturity model:

- How far is the customer from a situation where an appropriate number of security measures have been implemented to protect the business and the recommended level of security awareness has been reached.

What's next:

- Improving a customer's vulnerability to cyber threats;
- Development of necessary security measures, along with configuration and services.

Cost of service: 500 €

* A full audit for the implementation of the cloud environment can be agreed separately.

Cloud Environment Security Monitoring (CESM):

Cloud Environment Security Monitoring – Service Plan 1
